LUXOR ARCHITECTURAL

COLLECTION 2027

LEED Documentation

Extruded aluminum cladding and soffits

This sheet helps project teams document the use of Luxor cladding and soffits for LEED v4 or v4.1. Eligibility depends on the rating system, registered version and evidence submitted for the project.

Product	Information
Luxor System	Tongue-and-groove cladding and soffits
Material	6063-T5 extruded aluminum
Finishes	Sublimated woodgrain finishes and solid colours
End of Life	Recyclable aluminum. Recovery depends on available recycling services.

Scope of This Sheet

LEED certification applies to the building project. This sheet describes information available for the Luxor system. Credits and points are assessed at the project level.

Documenting the Project

Verify requirements with the project’s LEED lead before claiming a contribution.

Category	What the Project Team Can Document
MR · Construction Waste	Include aluminum offcuts in the construction waste management plan. Record actual recovered quantities and retain the recycler’s receipts.
MR · Sourcing	To claim recycled content, obtain a declaration covering the supplied product reference and stating pre-consumer and post-consumer percentages. This sheet declares no recycled-content percentage.
MR · Environmental Product Declaration (EPD)	No EPD specific to the Luxor system is provided in this package. Before claiming a contribution, verify the EPD’s scope, eligibility and covered products.
EQ · Low-Emitting Materials	Check the credit scope for the application. Luxor provides no VOC emissions certificate for this system. This sheet does not establish compliance with the credit.
EA · Energy Performance	If the cladding forms part of the modelled envelope, use complete assembly data validated for the project.

Information to Send to Luxor

Provide the project, LEED system and version, targeted credit, intended use, product references and finishes. Specify the supporting document requested so Luxor can confirm availability.
